

External Transport & Distribution Via IBC's

More and more process industries are looking to extend the use of IBC's beyond their production plant. IBC's may be used to handle materials being purchased from suppliers, or being shipped to customers or further processing plants. This is a major boost to production efficiency and 'supply chain integration'.

The benefits of using IBC's in this way are enormous.

- Incoming material can be used directly in process without unpacking and messy transfer
- Finished goods can be shipped in semi-bulk, eliminating expensive packing operations
- Stable partnership relationships are encouraged between supplier and customer
- The environment benefits by elimination of packaging disposal

Matcon have considerable experience in providing IBC's for distribution:

- Wide range of container options - steel, plastic, flexible
- IBC's for food, chemical, pharmaceutical or other solids
- UN Chapter 16 and DOT 56 certified if appropriate
